OBJECTIVE

QA-focused Application Analyst with practical experience in banking and financial applications, covering Manual, Functional, API, Integration, Regression, UAT, System, Smoke, Sanity, and End-to-End Testing. Experienced in Postman, SQL, MySQL, JMeter, backend validation, test case design, defect management, production issue investigation, root cause analysis, and release verification. Strong understanding of SDLC, STLC, and Agile, with hands-on experience coordinating with clients, developers, IT/Ops, and cross-functional teams from issue understanding through fix verification, regression testing, and release validation.

CORE TECHNICAL SKILLS

Testing:	Manual Testing, Functional Testing, Integration Testing, Regression Testing, Smoke Testing, Sanity Testing, UAT, End-to-End Testing, System Testing, Test Case Design & Execution.
API / Database:	REST API Testing, Postman, SQL, MySQL, Backend Data Validation, Database Testing, SQLYog, MongoDB Compass.
Performance:	Apache JMeter.
Tools / Processes:	Jira, Microsoft Excel, SDLC, STLC, Agile, Defect Management, Root Cause Analysis, Release Verification, Production Support, Production Issue Investigation.
Domain:	Banking Applications, Core Banking, Loan Management, Deposit Management, CRM, Financial Accounting, Credit Management, eKYC, Digital Banking, Financial Transactions.

WORK EXPERIENCE

SQA Engineer & Application Analyst – MFSYS

Sep 2025 – Present

- Investigate and analyze client-reported issues across banking and financial applications.
- Determine whether issues arise from user or process errors, application defects, configuration issues, or incorrect data.
- Reproduce issues and perform functional, backend, and database validation.
- Perform REST API Testing with Postman and SQL-based backend validation.
- Investigate production issues and review application/server logs where required.
- Coordinate with developers, IT/Ops, and other teams for resolution.
- Test fixes, perform regression testing, and verify deployments/releases.
- Communicate with clients to clarify issues, gather information, and communicate resolutions.
- Prepare test cases, verification reports, SRS-related documentation, and QA documentation.
- Coordinate QA activities and support intern task assignment, follow-up, and evaluation.

QA Engineer – Innovator Solutions

March 2025 – June 2025

- Performed manual, functional, regression, and API testing.
- Designed test cases and maintained QA documentation.
- Performed SQL backend validation, Postman API testing, Jira defect tracking, and developer coordination.

EDUCATION

BS Software Engineering

Kohat University of Science and Technology, Kohat | 2025

BANKING DOMAIN EXPERIENCE

Domain Expertise

Core Banking | Loans | Deposits | CRM | Financial Accounting | Credit Management | eKYC | Digital Banking | Financial Transactions

1. Digital Kisaan – MIS

Functional | End-to-End | Regression | Financial & Credit Management

- Tested Financial Accounting workflows including GL, Trial Balance, Balancing, and Client Management. Loan lifecycles, repayments, and service charges.
- Validated Cooperative Governance, Inventory, Member Registration.
- FIC valuation, asset depreciation, role-based access, data integrity, and replicate CMCNCH handling while logging, tracking, and retesting defects.

2. HFI – Order Tracking System

Functional | End-to-End | Regression | Jira

- Performed end-to-end testing of order tracking and processing workflows, including internal and external certifications.
- Validated cross-module data consistency, reported defects in Jira, and performed registration testing after fixes.

3. LoanLeaf – Loan Management Application

Functional | Registration | API | SQL

- Tested loan application, approval, disbursement, and repayment.
- Performed Postman API testing and SaaS-based backend validation, then identified, tracked, and retested defects.

4. Mobile AppDFS – Digital Banking Mobile Application

Functional | Regression | API | Postman

- Tested login, account management, and transaction workflows.
- Validated backed responses, and coordinated issue investigation with developers.

5. CiiHive – Banking System

API | Integration | End-to-End | Background Validation

- Tested banking workflows, financial transactions, and account management modules.
- Performed API integration, and end-to-end testing with backend validation.
- Validated Backward defects and supported release validation.

6. EDBA | MCONNET – Banking & eKYC Platform

API | Integration | Production Support | eKYC

- Investigated banking application issues and provided production support, including functional verification, defect resolution, and release validation.
- Performed eKYC API validation and investigated authentication and integrity using backend and application/log analysis where required.
